

# HPI and Y O U

Kim Gant

Department of Archaeology & Historic Preservation

December 2019

# New Wisaard

- Coming very very soon
- Total code rewrite and front end redesign
- Line drawing capability
- Drag and drop photos
- We will do webinars
- Lots of problems solved

# What & Why HPI?

**What?** *Washington State Inventory of Architectural Records*

**Why?** *Documentation, Preservation Planning, Regulatory Compliance*

**Who?** *Professional consultants, federal/state agencies, CLGs/Local governments, Public, DAHP staff*

# Instructions/Guidelines

<https://dahp.wa.gov/project-review/washington-state-standards-for-cultural-resource-reporting>

<https://dahp.wa.gov/project-review/wisaard-system>

# Reconnaissance vs. Intensive

- Minimal background research
- Two photos
- Brief statement of significance based on known or readily available information
- Intensive Research/Primary sources
- More photos/historic
- Plans
- Sketch plan
- Well argued statement of significance

# Qualifications

# HPI Rules to Live By

- The absence of information is better than wrong information
- No piece of data needs to be entered twice
- Name every resource
- One building/structure = One Form
- Only Information relevant to the subject of the form on the form
- Search before creating new HPI

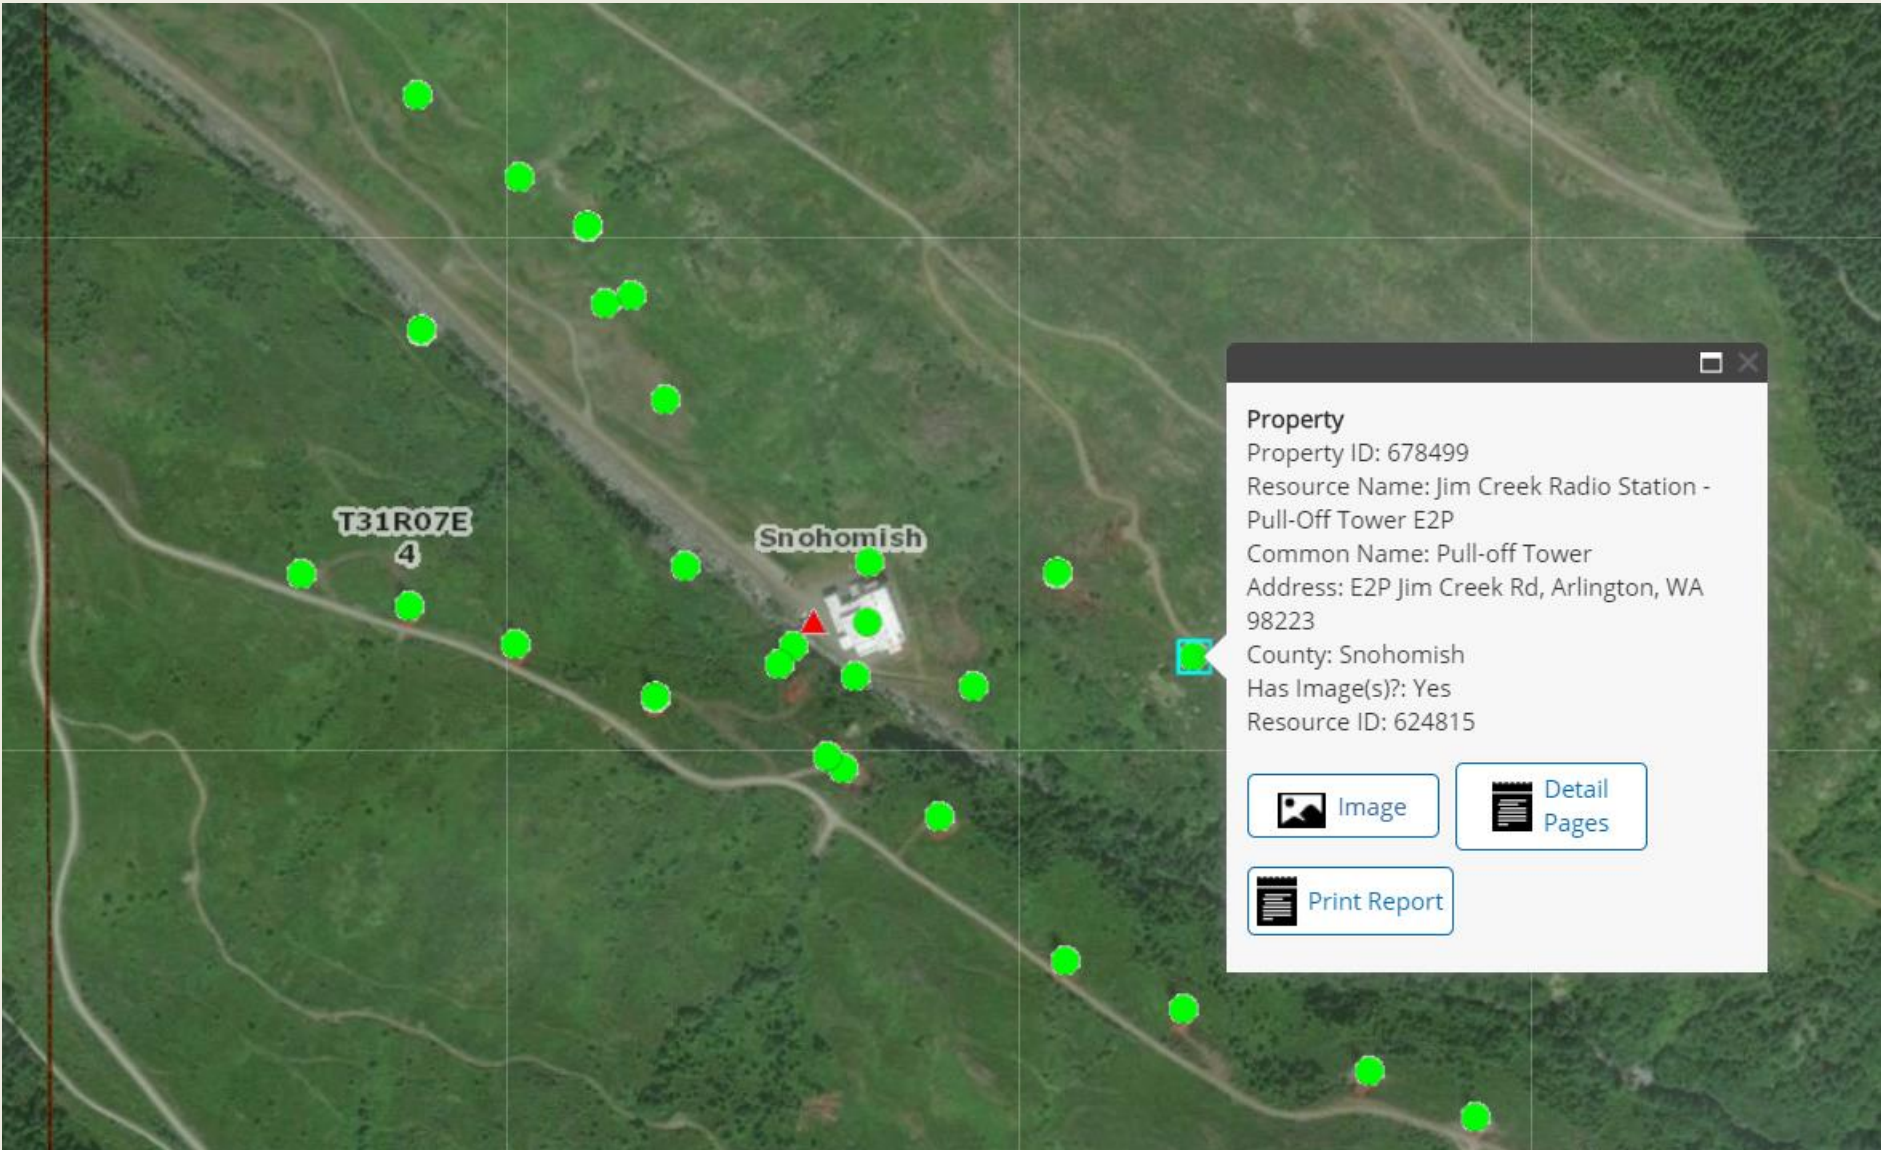

# One Resource = One Form

- One name
- One point/line
- One set of characteristics
- One determination of eligibility

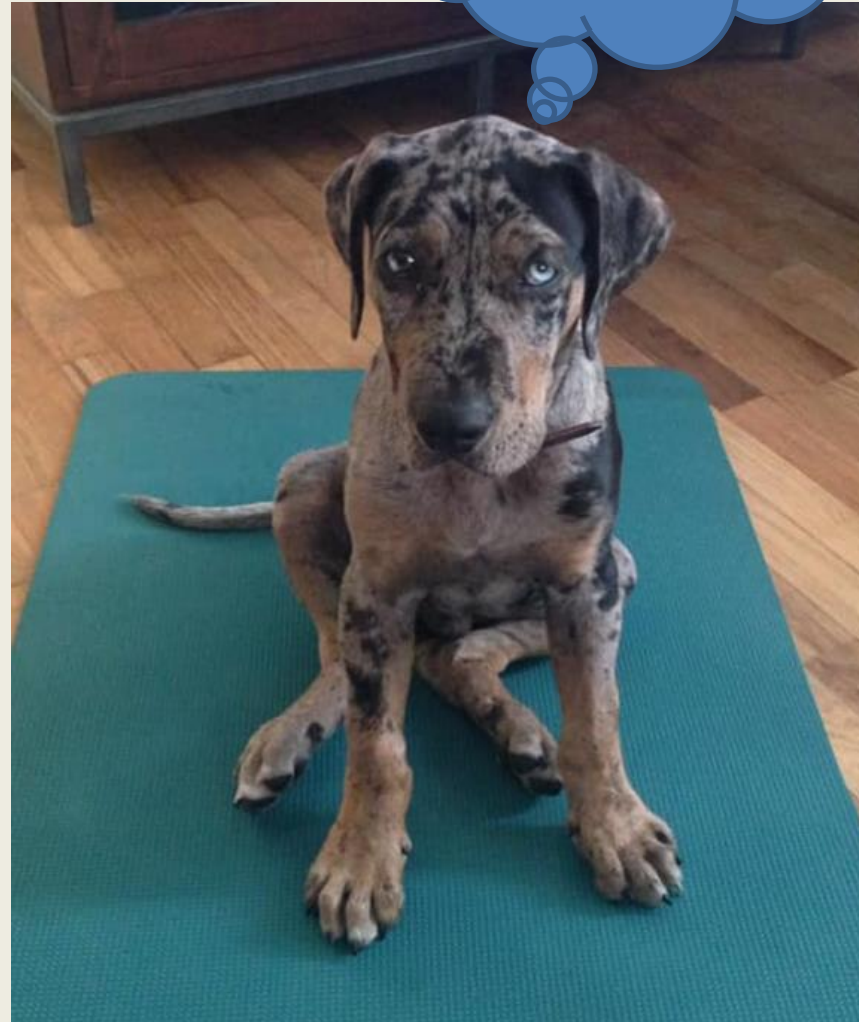

# One Resource = One Form

# Name

- Historic Name or generic
- No acronyms
- No arbitrary numbers
- Complexes – use name of complex and name of building
- Common name, if applicable, should be different

Say my  
NAME! Say  
my NAME

RESOURCE NAME

# NEW! Recording Linear Alignments

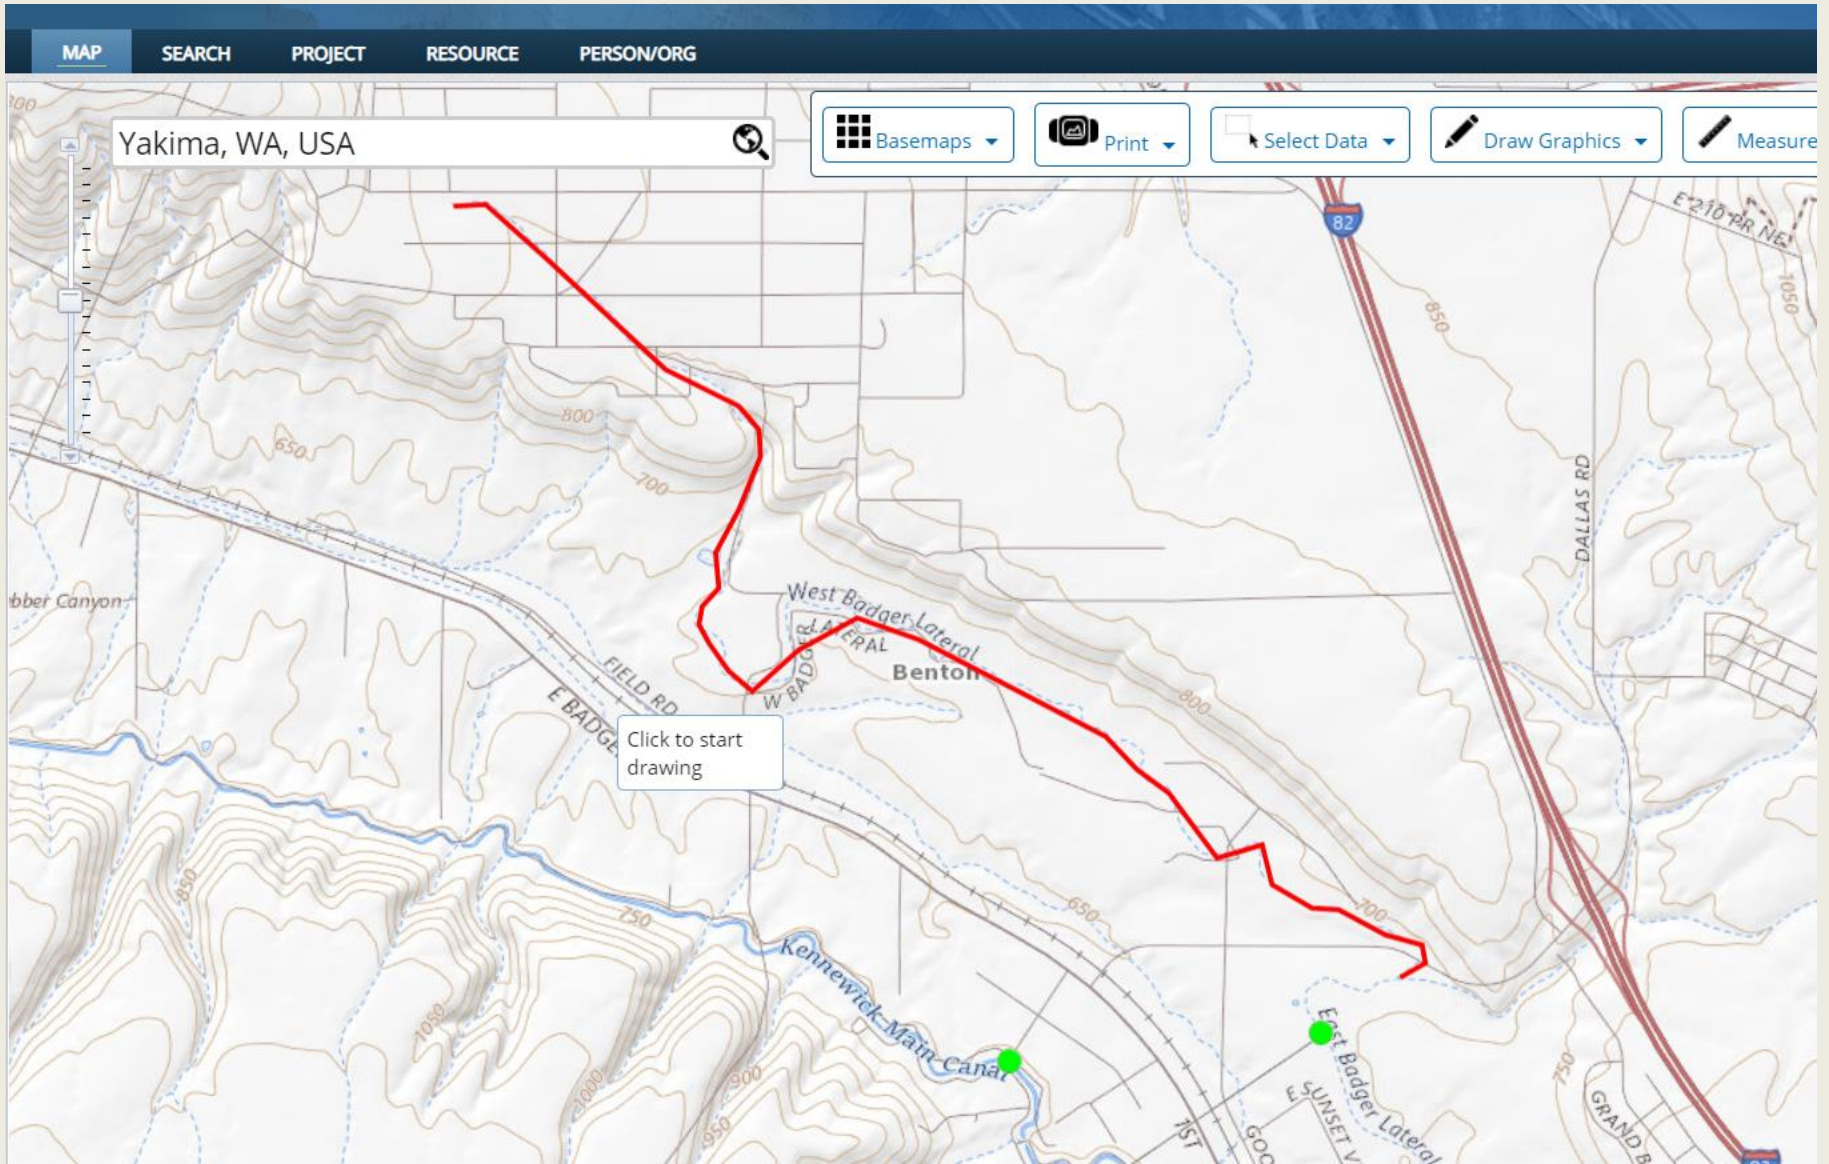

- New Wisaard will have line mapping
- Determine status – if active, line is probably intact; if abandoned, line may not be intact
- Location and Design = Integrity
- Repetitive features = Don't record separately
- Draw the entire feature, no arbitrary segments

# Railroad

# Irrigation

# Transmission Lines

- Main Lines, 50 years or older and come from a main power station
- Most BPA resources are recorded – see *Bonneville Power Administration (BPA) Pacific Northwest Transmission System MPD* for context info
- Don't record towers/poles separately

# HPI Data Fields

- Geographic areas – auto generated
- Property Type – Building, structure, site, object (no districts)
- Construction Dates – exact dates if known. Or use Circa
- Historic/Current Use
- Architect/Engineer/Builder
- Historic Context

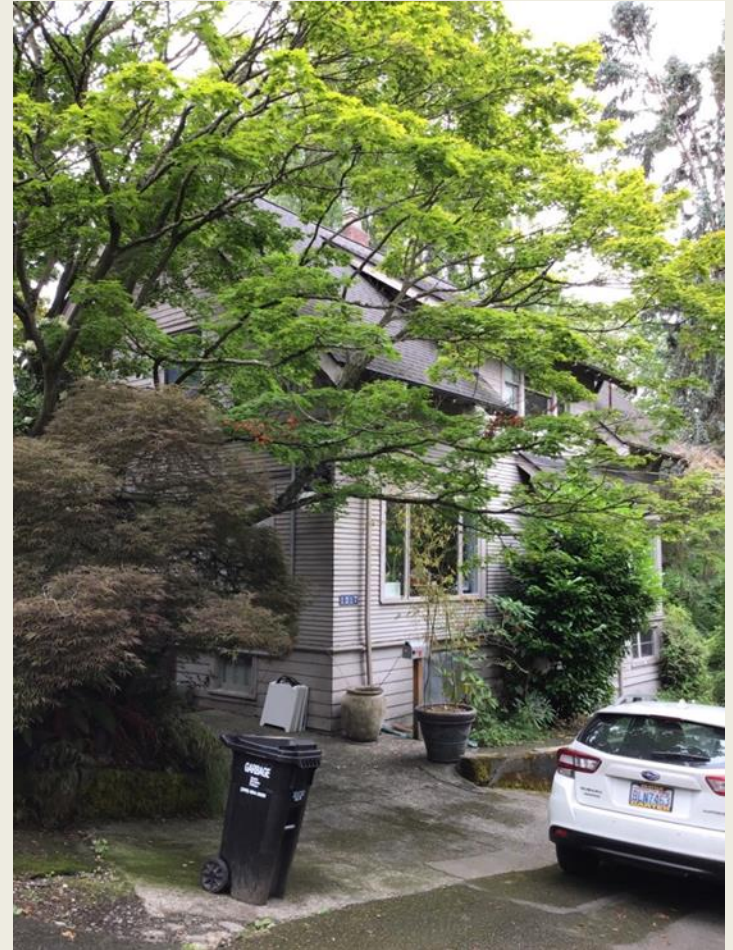

# HPI Data Fields

- Number of stories
- Field Site Number, for compiler use
- Field Recorder, individual name
- Inventory level
- Changes to Structure = quick building integrity

# Photos

- Individual JPEG
- Take photos in landscape
- 1280 x 960 at 72 dpi. This is about a .5 MB photo that fills a computer screen
- Resize/rotate photos before uploading
- They will upload in the order that you select them
- Label them/change the names
- PDFs of plans ok – jpeg if you want them to print
- Front and oblique

# Characteristics

1. If you don't know, leave it blank
2. Select the most specific
3. If it is blank or wrong, we will fill it in

Garbage in  
Garbage  
Out!

# Styles

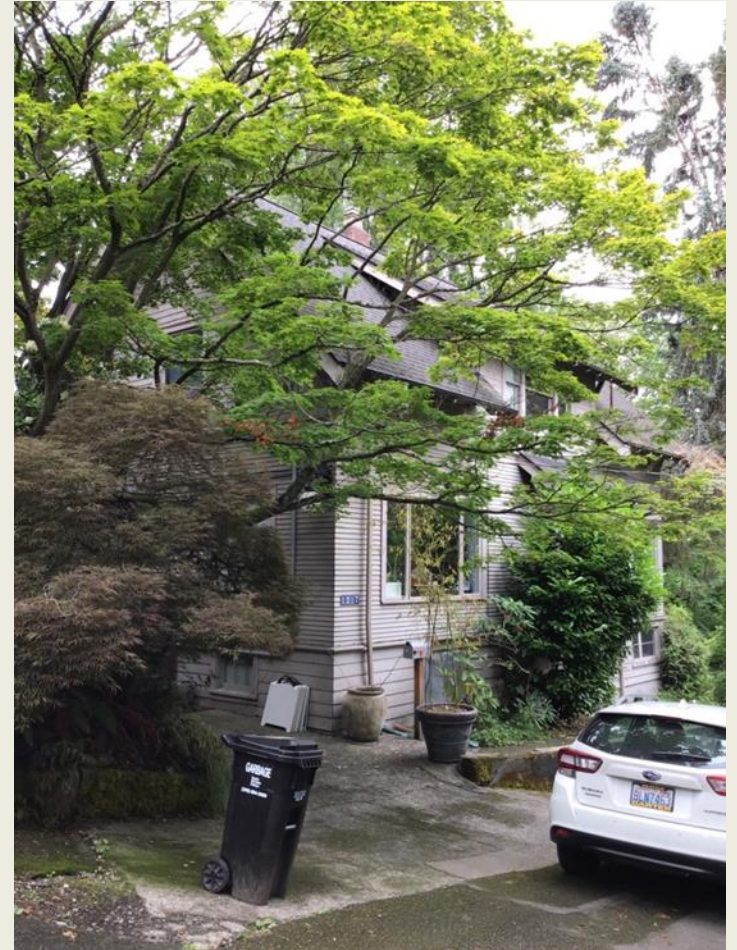

# Registers

- NR/WHR listed properties have the info here – read only
- District/Thematic associations are fairly reliable, but not comprehensive
- Local Register data is not maintained by DAHP, only by CLGs – for local register questions contact the locals

# Physical Description

- Describe the building, especially the parts that can't be seen in the photos

# Statement of Significance

- Depends on the goal of the survey project

Is it  
regulatory?

# Questions
