● Here's proof that the simple rectangle (which is relatively economical to build, naturally) can, when properly planned, result in unique living patterns. The exterior can be exceedingly appealing, too. Study the floor plan carefully. The efficiency of the kitchen

could hardly be improved upon. It is strategically located to serve the formal dining room, the family room and even the rear terrace. The sleeping facilities are arranged in a most interesting manner. The master bedroom with its attached bath and dressing room

will enjoy a full measure of privacy also on this floor. A second bedroom is also on this floor and has a full bath nearby. Upstairs there are two more bedrooms and a bath. Don't miss the laundry, the snack bar, the beamed ceiling or the sliding glass doors.
