

DAHP - SITE TYPE TABLES

Three types of inventory forms are used to document cultural resources in the state of Washington. Archaeological site types are recorded onto DAHP's Archaeology Site and Isolate Inventory Forms. Components of the built environment (i.e. buildings and structures) are submitted into the Historic Property Inventory Database. The following table has been generated to provide guidance when it is not entirely clear which inventory form should be used to record data. Below is a list of property types that may be encountered in the field. If questions arise, contact DAHP staff for further guidance.

Remember that a single site may have multiple components - both historic and archaeological, or historic and historic archaeological, etc. More than one site type may be used for a single site. Please select all types that may apply and record each feature on the appropriate inventory form.

Historic features in ruin (collapsed structures, foundations, etc.) that are older than 50 years are considered historic archaeological sites and must be recorded on the Archaeology Site Inventory Form. If the resource in ruin is less than 50 years old, it should not be recorded at all unless it possesses exceptional significance.
